

Learning in European Union peacebuilding: Rhetoric and reality

Journal:	<i>Global Affairs</i>
Manuscript ID	RGAF-2018-0023
Manuscript Type:	Research Article
Keywords:	CFSP, CSDP, learning, foreign policy, security policy, peace building
Abstract:	<p>The EU's growth as a security actor since 2003 has been closely accompanied by the development of various learning mechanisms in order to help improve the EU's performance in this realm. As most such activities have involved civilian missions rather than military operations, this article focuses on the learning culture underpinning the EU's civilian conflict prevention and peacebuilding activities. This is especially critical as the EU has increasingly framed these efforts in terms of adaptive and ideational factors in host countries (training, mentoring, reform, advising, capacity-building, resilience, etc.) rather than as 'interventions' whereby the EU deploys its own resources to manage host country problems. In other words, the EU is attempting to enhance the ability of host countries to prevent or resolve conflicts on their own. However, it is also clear that such efforts do not always produce the desired results in host countries, especially in a crisis situation, and that the EU does not always follow its own procedures regarding learning. Therefore despite considerable progress since 2003 there is still much room for improvement in this realm, along with a need for broader institutional reforms to improve the EU's capabilities as a security actor.</p>

21 The EU's growth as a security actor since 2003 has been closely accompanied by the
22 development of various learning mechanisms in order to help improve the EU's performance
23 in this realm. As most such activities have involved civilian missions rather than military
24 operations, this article focuses on the learning culture underpinning the EU's civilian conflict
25 prevention and peacebuilding activities. This is especially critical as the EU has increasingly
26 framed these efforts in terms of adaptive and ideational factors in host countries (training,
27 mentoring, reform, advising, capacity-building, resilience, etc.) rather than as 'interventions'
28 whereby the EU deploys its own resources to manage host country problems. In other words,
29 the EU is attempting to enhance the ability of host countries to prevent or resolve conflicts on
30 their own. However, it is also clear that such efforts do not always produce the desired
31 results in host countries, especially in a crisis situation, and that the EU does not always
32 follow its own procedures regarding learning. Therefore despite considerable progress since
33 2003 there is still much room for improvement in this realm, along with a need for broader
34 institutional reforms to improve the EU's capabilities as a security actor.

3 Policy learning is a key area of increased EU activity in the realm of foreign/security
4 policy and other policy domains as well as a central concept in the related academic
5 literature. Within foreign and security policy in particular, in the past fifteen years the EU
6 has devoted far more attention to processes of institutional learning and best practices than it
7 had ever attempted between the 1970s and 1990s. Although EU foreign/security policy
8 cooperation became more institutionalized, though not 'supranationalised' like EU economic
9 policy, after the Maastricht Treaty on European Union (Øhrgaard 1997; Author 2003), the
10 EU still struggled to cope with various external problems, particularly in the Balkans, though
11 its new Common Foreign and Security Policy (CFSP). Further institutional reforms in this
12 realm were undertaken by the late 1990s to develop what is now known as the Common
13 Security and Defence Policy (CSDP), while the EU has also paid far more attention to
14 learning processes in order to take on a wider range of security-related tasks, such as conflict
15 prevention/resolution, crisis management, and peacebuilding/peacekeeping.

31 This 'learning turn' in EU foreign/security policy is a consequence of two general
32 factors: 1) foreign/security policy cannot be managed like socio-economic EU policy
33 domains, in the form of forward-looking regulations and directives; and 2) EU member states
34 still resist extensive delegation of certain responsibilities to centralised EU organisations such
35 as the Commission and the European External Action Service (EEAS). These conditions are
36 unlikely to change in the foreseeable future, which is why the EU continues to invest time
37 and effort in social/networking/learning mechanisms and informal (as well as formal/legal)
38 institution-building to improve its performance in this realm, while maintaining it as a
39 decentralised policy sector still under the direct control of EU member states (i.e., more
40 intergovernmental than supranational).¹

2
3 The emergence of a learning culture within the realm of EU peacebuilding in
4
5 particular offers researchers a unique opportunity to investigate how a complex organisation
6
7 attempts to adapt itself in various ways to take on a wide range of new political tasks, some
8
9 of which can be extremely risky. This objective has been built into several recent EU-funded
10
11 research projects to help assess specific outcomes in the realm of peacebuilding with a view
12
13 to improving the EU's performance in future endeavours.² In this paper, I focus on the
14
15 learning-related contributions of the EU-CIVCAP project in particular, beginning with an
16
17 overview of how learning is defined and measured within the context of the EU's
18
19 peacebuilding activities.³ In the second section, I highlight some of the major lessons
20
21 identified by the other articles in this Forum (see also EU-CIVCAP 2018). In the third
22
23 section I address some remaining challenges in this realm, in light of not just the major
24
25 findings of EU-CIVCAP but also the EU's new ambitions as framed in its 2016 Global
26
27 Strategy (HR/VP 2016) and other documents.

33 **I. Conceptualizing learning in EU peacebuilding**

34

35 Policy-relevant learning can be viewed most generally as a type of deliberate political
36
37 reform, and should be distinguished from other related forms of change, such as vague
38
39 'lessons of history' (i.e., analogical reasoning) or mere 'adaptation' to new circumstances
40
41 (Levitt & March 1988; Levy 1994; Zito 2009; Zito & Schout 2009). The purpose of policy-
42
43 relevant *learning* on the part of the EU is to improve the fit between its existing institutional
44
45 framework, organisational routines, and stated goals or ambitions, in this case involving
46
47 peacebuilding. While analogical reasoning or adaptation efforts do not typically involve
48
49 changes in core institutional values or purposes, learning can be conceptualised as a process
50
51
52

53
54 ² In addition to EU-CIVCAP, these include EUCONRES, EUNPACK, IECEU, and WOSCAP (among others).

55 ³ In this article, peacebuilding is understood in broad terms as a range of activities aiming to reduce the risk of
56
57 war (conflict prevention), address the roots of conflict, and promote sustainable peace (see for instance, Paris
58
59 and Sisk, 2009).
60

1
2
3 of deliberate, long-term, and highly self-reflexive institutional reform (Haas 1990). At a
4
5 minimum, it consists of: 1) regularly benchmarking or reviewing EU policy performance in
6
7 specific domains; 2) actively generating possible lessons as a result of the experience gained
8
9 in undertaking new actions ('lessons identified'); 3) deliberately transforming lessons into
10
11 policy-relevant knowledge through feedback/monitoring/training processes; and 4)
12
13 institutionalising new knowledge ('lessons learned') for application to future operations,
14
15 often in the form of (narrow) best practices, concepts, doctrines, and (broad) strategic plans.
16
17

18 Based on these processes, EU-CIVCAP researchers have attempted to identify
19
20 examples of potential 'experiential institutional learning', defined as a need for changes in an
21
22 institution's responsibilities/functions, rules/procedures, and resources/capabilities as a result
23
24 of new information, observation, or experience.⁴ As we shall see in the next section, these
25
26 examples take the form of specific 'lessons identified' regarding responsibilities, rules, and
27
28 resources.⁵ By *responsibilities* we refer to the EU's own conception of its place in the world
29
30 and the specific types of foreign/security policy activities (such as peacebuilding) that might
31
32 reflect or advance its role. Although this articulation of the EU's responsibilities can be
33
34 framed in terms of treaty articles and general strategic documents, EU-CIVCAP researchers
35
36 have attempted to demonstrate this in far more specific terms regarding, for example, a
37
38 CFSP/CSDP joint action (i.e., in terms of a 'mandate'). Changes in responsibilities as a
39
40 result of experiential learning can be measured in three main ways: 1) an expansion and/or
41
42 clarification of the initial mandate during the planning and/or implementation phases of a
43
44 policy; 2) a change in the duration and/or geographic scope of a policy; and 3) the creation of
45
46 complementary or follow-on policies in order to fulfil the original mandate and/or related
47
48 policy goals, such as development or humanitarian assistance.
49
50
51
52
53

54
55 ⁴ For a more detailed discussion, see Author (2017a) and Author (2017b).

56 ⁵ It should be made clear that these are 'lessons identified' by EU-CIVCAP researchers and should be
57 distinguished from the EU's own lessons observed, identified, or learned as generated by its internal procedures.
58

1
2
3 By *rules* we refer to the regulations or principles governing a particular domain of
4 activity, in this case the institutional structures and policymaking routines that guide the EU's
5 peacebuilding activities as well as the more general relationship between this capacity and
6 other major EU foreign policy initiatives, such as the European Neighbourhood Policy. As
7 peacebuilding is not a distinct EU policy domain, it involves the ongoing coordination of a
8 range of actors and institutions through the use of informal customs/norms and formal rules;
9 these of course can also reflect, and possibly influence, how the EU determines future
10 responsibilities and allocates resources to them. EU-CIVCAP researchers therefore attempt
11 to identify a need for rule changes that could involve the modification of existing rules
12 (including the role of various organisational actors) or the creation of entirely new ones in
13 order to improve policy performance. Moreover, as the EU increasingly works with other
14 partners in this realm (such as the UN and the OSCE), EU-CIVCAP research also
15 investigates the EU's relations with such actors (see, for instance, Dijkstra et al, this issue;
16 Faleg, this issue).

17
18
19 Finally, by *resources* we refer to a need to change both material and non-material
20 assets the EU makes available for the purpose of building sustainable peace. Material
21 resources might include financing, technologies, personnel, and equipment provided by the
22 EU or its member states (Pirozzi et al., this issue); non-material resources might include the
23 provision of best practices, doctrines, concepts, progress reports, and other sources of
24 knowledge relevant to the creation and implementation of certain policies. This also includes
25 the creation of new institutions or bodies directly involved in peacebuilding activities (which
26 overlaps with 'rules' above)(see Davis, this issue). EU-CIVCAP researchers also distinguish
27 between general changes in resources for the peacebuilding domain (such as an increase in
28 the EU's aid budget or the procurement of a new technology) and the provision of specific
29 resources for a joint CSDP action or similar crisis/conflict response mission. This latter

2
3 component also involves the provision of resources as determined through contributions by
4
5 EU member states as well as by the EU budget.
6

7 To summarise our approach, experiential institutional learning in the EU context
8
9 differs from bureaucratic/organisational or individual/cognitive learning, although elements
10
11 of these approaches do overlap in practice. As noted above, the most important difference is
12
13 that there is no single EU agency, bureaucracy, or organisation wholly responsible for
14
15 peacebuilding; instead, this capacity is shared across the EU, involving mainly the Council of
16
17 the EU, EU member states, the Commission, and the EEAS. Moreover, the EU also
18
19 developed two distinct approaches to activity in this realm, depending on whether they were
20
21 primarily military or civilian in nature; EU-CIVCAP researchers focus mainly on the civilian
22
23 realm but with a view towards civilian-military linkages as one of four important cross-
24
25 cutting issues identified by the project (see below). Therefore, a bureaucratic or
26
27 organisational approach to learning, which focuses on fairly rigid standard operating
28
29 procedures or routines (Levitt & March 1988), would be too narrow to explain the
30
31 development of these two major EU capabilities (military and civilian), while an individual-
32
33 level or cognitive approach to learning would be far too broad if applied to peacebuilding as a
34
35 general policy domain,⁶ especially as most EU policies in this realm are organised on a case-
36
37 by-case basis and its mission personnel do not always serve in multiple actions over time.⁷
38
39
40

41 Thus, if learning is to occur in this domain, given its decentralised bureaucratic
42
43 structure and rotating operational personnel, it must involve changes within and among the
44
45 policy units charged with conducting specific policies as they take on new tasks that force
46
47 them to evaluate, and possibly reform, their normal ways of doing things. Through a focus
48
49 on the EU's actions in the Balkans and the Horn of Africa in particular, EU-CIVCAP
50
51 researchers have attempted to identify specific examples where such reforms are needed,
52
53

54
55 ⁶ For example, Tonra (2003) has applied such an approach to the creation of the CFSP; also see King 2005.

56 ⁷ One small exception to this tendency involves the use of 'follow-on' policies to support or extend already
57 existing ones, as they may make use of existing personnel.
58

1
2
3 which brings us to the lessons identified database (see, for instance, Edmunds et al, this issue;
4 Zartsdahl & Rodt, this issue).⁸
5
6
7
8

9 **II. Lessons identified in EU peacebuilding**

10
11 As experience-driven learning involves the generation of shared knowledge to help
12 improve policy performance, the process requires clarity and transparency regarding specific
13 lessons and any best practices that might result from them. Toward this end, EU-CIVCAP
14 has produced an online lessons identified database (or catalogue) that summarises some of
15 the most important findings of the project. It also organises them on the basis of various
16 keywords to make searches easier, grouped into six categories: 1) conflict life cycle stage; 2)
17 policy-making phase; 3) country or region where the lesson was identified; 4) institution(s)
18 involved in the lesson (EU and otherwise); 5) cross-cutting challenges involved (see Juncos
19 & Blockmans, this issue); and 6) other topics, such as technology or resources (among
20 others) (EU-CIVCAP, 2018).
21
22
23
24
25
26
27
28
29
30
31
32

33 The online database (or catalogue) of lessons went 'live' in early 2017 and has been
34 populated with 25 lessons identified. Evidence for each of the lessons has been collected
35 from official documents and reports, secondary sources, and dozens of interviews with
36 practitioners in Brussels and in the field. Space considerations prevent a detailed discussion
37 of each of them, but the articles in this Forum identify a number of key lessons. For example,
38 some of them involve conceptual or ideational factors that inspire the EU's overall approach
39 to building sustainable peace. Despite a steadily increasing number of EU reports since the
40 late 1990s about its foreign/security policy strategy, doctrines, concepts, and related ideas,
41 more specific guidance about the EU's fundamental understanding of, and approach to,
42
43
44
45
46
47
48
49
50
51
52

53
54 ⁸ Institutional learning in the realm of peacebuilding can also be measured in terms of other parameters, such as
55 where the lessons identified appeared in the EU's vertical chain of command (i.e., the strategic/political level,
56 the operational/headquarters level, and the theatre/tactical level); these however are beyond the scope of this
57 article (see Author, 2017a for a more extensive discussion).
58

1
2
3 conflict tasks in particular is still lacking (Davis, this issue). More guidance here is
4
5 especially important considering the decentralised, even fragmented, approach to conflict
6
7 prevention/peacebuilding/crisis management tasks involving a range of actors in Brussels, in
8
9 EU member states, and in host countries. In this complex system, leadership (or the lack
10
11 thereof continues to be a recurrent problem (Davis, this issue). The need for new concepts
12
13 also feeds into other lessons regarding specific rules and procedures to enhance coordination
14
15 among the Commission, EEAS, EU member states, and other partners/stakeholders involved
16
17 in peacebuilding through a more integrated approach (Faleg, this issue).
18
19

20
21 Beyond general concepts and more specific procedures about peacebuilding, a
22
23 number of other lessons focus on enhancing the material resources available to the EU for
24
25 such tasks, such as personnel, financing, technology, and other equipment, including
26
27 resources shared with other partners. These lessons also include insights regarding training
28
29 practices, the integration of various technologies (such as Big Data, social media, satellites,
30
31 and drones), and the internal coordination of these resources (Pirozzi et al., this issue), all of
32
33 which also relate to a set of lessons regarding the EU's evolving concept of its
34
35 'comprehensive' or 'integrated' approach to foreign/security policy, which involves applying
36
37 a full range of resources and policy tools to the full spectrum of security assistance tasks and
38
39 the conflict life cycle (Faleg, this issue). This set of lessons in turn feeds into other lessons
40
41 involving the use of different EU instruments (from trade to development aid policies to the
42
43 CSDP) in the context of peacebuilding tasks as illustrated by the cases of the Western
44
45 Balkans and the Horn of Africa (Zartsdahl & Rodt, this issue).
46
47

48
49 The EU also often works closely with other institutional partners in peacebuilding,
50
51 such as the UN and NATO, as well as with local stakeholders in host countries, so another set
52
53 of lessons focuses on these factors in particular, including the goal of more local ownership,
54
55 regional engagement, and host country capacity-building (Edmunds et al., this issue). The
56
57
58
59

1
2
3 need to avoid working as cross-purposes or duplicating effort is a constant challenge in
4
5 conflict zones, yet despite the EU's years of experience with the UN, NATO, OSCE, AU,
6
7 and other partners there is still much room for improvement in terms of agreeing on
8
9 priorities, negotiating the division of labour for specific tasks, and exchanging mission
10
11 resources (Dijkstra et al., this issue). This need for enhanced coordination also extends to the
12
13 role of local partners ('local ownership') and host country capacity-building, and the EU
14
15 should develop clearer guidelines about how to define local owners and then involve them in
16
17 the planning and implementation phases of peacebuilding tasks (Ejdus & Juncos, 2018).
18
19 Finally, such efforts should then enhance the prospects for post-conflict sustainability in a
20
21 host country once the EU's direct involvement in peacebuilding ends (Edmunds et al., this
22
23 issue).
24
25
26
27
28

29 **III. Lessons, learning, and institutional change**

30
31 The emphasis on learning as a way to facilitate international cooperation is part of a
32
33 much broader literature on ideational, discursive, and social factors, such as networks, norms,
34
35 speech acts, expert knowledge, rhetorical action, imitation/demonstration effects, and so on,
36
37 many of which also find their way into formal institutions once they have demonstrated their
38
39 potential. Evidence from the articles in this Forum and the wider literature clearly
40
41 demonstrates that the EU has developed a complex learning culture and that certain lessons
42
43 have improved the conduct of peacebuilding tasks by the EU and its partners (Orsini 2006;
44
45 Duke 2009; Flessenkemper & Helly 2013; Faleg 2016; Author 2017a). However, it is also
46
47 very clear that there are limits to this approach as a mechanism to reform the EU's
48
49 institutions and procedures for foreign/security policy cooperation. It is also becoming
50
51 apparent that a learning approach, by itself, will not suffice in terms of equipping the EU to
52
53 cope with the range of security problems in its neighbourhood and beyond, or empower the
54
55
56
57
58
59
60

1
2
3 EU to fulfil its wider ambitions under the EU Global Strategy (HR/VP 2016).

4
5 One problem is that just as peacebuilding is not a single policy domain (nor is crisis
6
7 response/management more generally), there is no single learning or lessons identified
8
9 framework to help improve the process. Most significantly, there is a major divide between
10
11 the civilian and military aspects of peacebuilding, which have their own learning cultures
12
13 (Pihs-Lang 2013; Author 2017a); this may not only inhibit effective civilian-military
14
15 coordination but may also may lead to the development of distinct strategic cultures
16
17 regarding how to conduct various activities.⁹ In addition, lessons identified - whether civilian
18
19 or military - can be generated from multiple levels of analysis, from the strategic/political
20
21 level to the operational/planning level to the theatre/host country level. These various levels
22
23 also involve institutions in Brussels, in EU member states, and in other partners/stakeholders
24
25 (particularly the UN and NATO), which have their own approaches to learning and which
26
27 may not mesh with those of the EU. Although the EU has attempted to devise more
28
29 synergies between them using various coordinating mechanisms, there is still much room for
30
31 improvement that could involve shared fact-finding missions, planning/deployments, after-
32
33 action reviews, best practices, training courses, and so on.

34
35
36
37 In addition to varied learning approaches throughout the EU's peacebuilding network,
38
39 a second major problem is that the EU does not always follow its own rules regarding lessons
40
41 identified. Actors throughout the EU are guilty of such behaviour; this includes the
42
43 Commission. Such failings can include minor problems (such as neglecting to hold learning
44
45 meetings or to issue a scheduled learning report, as well as taking longer than expected to
46
47 issue a report) to major ones (such as neglecting to change a CSDP mission in light of lessons
48
49 identified)(see European Parliament 2012; Author 2017a). Similarly, as peacebuilding is an
50
51

52
53
54 ⁹ Despite the EU's limited experience with major CSDP deployments, especially military ones, there is a
55
56 longstanding debate in the literature about the advent of an EU strategic culture. For a comprehensive summary
57
58 see Schmidt & Zyla 2013. The 2003 European Security Strategy also mentions the need to develop a European
59
60 strategic culture 'that fosters early, rapid, and where necessary, robust intervention.'

1
2
3 aspect of EU security policy, the problem of transparency in learning procedures also may
4
5 inhibit a more effective approach to lessons/best practices. Lessons must be shared to be
6
7 effective, and the EU has not always been forthcoming in terms of how they are generated or
8
9 applied in specific circumstances. Given these problems, which have been identified in both
10
11 civilian and military EU networks, the EU's learning culture itself certainly could be
12
13 enhanced further in terms of more rigorous and consistent procedures across all actors, more
14
15 central coordination of all EU learning activities, more staff resources for learning activities
16
17 (particularly the appointment of learning/best practice officers for all peacebuilding
18
19 missions), and, possibly, the use of outside evaluators or auditors.
20
21

22 A third problem is that the 'mission approach' to peacebuilding tasks, which typically
23
24 requires the launch of a new CSDP action in a host country to last from several months to
25
26 several years, often involves the recruitment of new personnel from EU institutions in
27
28 Brussels and EU member states. Although some degree of staff recruitment and training
29
30 methods may help to create a certain *esprit de corps* among these individuals, the fact is that
31
32 multicultural operations of this type, as well as staff turnover as a mission develops plus the
33
34 decentralised nature of peacebuilding as a policy domain, can inhibit the kind of 'deep
35
36 learning' (or cognitive change) that could improve the EU's performance. Some studies have
37
38 argued that such changes in the CFSP/CSDP may in fact represent a so-called 'epistemic
39
40 community' in the realm of EU security affairs, which is defined as a distinct network of
41
42 professionals who rely on the same policy-relevant knowledge base and who share the same
43
44 views regarding a specific policy domain. Although this might be true in a general sense
45
46 across a wide range of EU security priorities (i.e. a preference for multilateralism, a focus on
47
48 prevention with civilian tools, stressing the EU's neighbourhood, and so on; see Howorth
49
50 2004 and Cross 2013), other work (Pihs-Lang 2013; Author 2017a) suggests that the EU has
51
52 not succeeded in building a true shared culture or epistemic community in the CSDP or

2
3 peacebuilding domains.¹⁰
4

5 Finally, even if the problems above could be addressed adequately to improve the
6 EU's overall approach to learning and best practices, they still pale in comparison to the need
7 for ongoing institutional reforms to empower the EU to address the changing security
8 challenges in its own neighbourhood and beyond. The EU has been funding research on
9 conflict prevention, peacebuilding, and related tasks precisely because its current approach
10 has not always produced the desired outcomes, meaning that the EU has not always lived up
11 to its claims as a security provider or as a stabilising force in areas where it claims to have an
12 major interest, such as the Middle East, North Africa, and the eastern borders of the EU itself.
13 In some cases the EU failed to act at all; in others the EU took too long to act to make a real
14 difference (i.e., a failure of rapid crisis response); and in others the EU did act quickly but
15 was not resourced adequately and/or had to scale back its mandate because of factors beyond
16 its control, whether inside or outside of the host country.¹¹

30

31 The EU Global Strategy (HR/VP 2016) attempts to address some of these problems in
32 terms of general principles (such as an emphasis on resilience in host countries), yet it does
33 not address a number of critical structural issues that inhibit the EU's capacity for crisis
34 response and security assistance. Perhaps the most important such structural problem is that
35 for all of its bureaucratic and legal complexity, the EU is still a treaty-based international
36 organisation composed of sovereign states, many of which have their own views about
37 security policy, conflict prevention, and peacebuilding. As EU member states still retain a
38 high degree of authority in those domains, and are wary of delegating greater authority to EU
39 institutions in Brussels, they can – and have – often prevented the EU from acting more

8 9 **IV. Conclusion**

10
11 The EU has made significant advances in the realm of peacebuilding through the
12 CFSP/CSDP mechanisms and other policy tools. In less than 15 years the EU has launched
13 over 30 CSDP foreign security assistance actions, many of which involve conflict
14 management goals, and has developed a range of strategies, concepts, guidelines, and other
15 policy statements to guide its ambitions as a conflict manager and peacekeeper. Our
16 emphasis in this Forum has been on the politics and practice of EU peacebuilding activity,
17 viewing it not as an ideal type or distinct EU policy domain but as an arena for political
18 contestation within and among key stakeholders in Brussels, host countries, EU member
19 states, and major EU partners. Part of this ongoing contestation also involves the generation
20 of potential lessons and best practices in this realm, which EU-CIVCAP has attempted to
21 document through the methodology discussed in this article.

30
31
32
33
34

35 However, there is still much room for improvement for the reasons discussed above
36 involving the overall coherence, management, and resourcing of EU peacebuilding activities
37 (Pirozzi et al., this issue), different institutional approaches to learning, erratic compliance
38 with agreed learning procedures, the varied roles of numerous stakeholders in a complex
39 decentralised system, the use of veto points by EU member states during decision-making,
40 various cross-cutting challenges (Juncos & Blockmans, this issue), and other factors.
41 Moreover, even when learning has helped to develop and resource new foreign security
42 actions, the comprehensive or integrated approach to crisis response is often still lacking,
43 whether in terms of linking civilian and military policy tools or linking the EU's (shorter-

2
3 term) security/conflict prevention agenda with its (longer-term) development/humanitarian
4 agenda (Coning & Friis 2011; Author 2017a; Davis, this issue; Faleg, this issue; Zartsdahl &
5 Rodt, this issue). The EU's failure to live up to the integrated approach in turn makes it seem
6 as if the EU is not a proactive strategic actor capable of shaping events but rather merely a
7 reactive bit player that offers a token contribution in certain host countries before moving on
8 to the next crisis.
9
10
11
12
13
14

15
16 The EU therefore must be not just more coherent, comprehensive, proactive, and
17 strategic but also far more realistic in terms of what it can achieve and why it is attempting to
18 achieve it. And it must be prepared to explain these decisions more effectively to European
19 citizens, especially if the programmes fail or if EU citizens are harmed/killed when running
20 them. Thus, although the EU has made significant advances in the peacebuilding domain,
21 and has built upon this experience through the creation of policy-relevant knowledge about
22 conflict and crisis management, it does not always manage to meet the growing demand for
23 decisive security assistance actions, especially on its borders. This is not for a lack of
24 resources; the EU (with its member states) possesses the human capital, knowledge base, and
25 material/technological tools to act like other major powers in many peacebuilding areas , yet
26 it still falls short in this area because of the various factors discussed in this Forum and in the
27 research it draws upon. Hopefully future such investigations will help empower the EU in
28 terms of choosing its strategic priorities, streamlining its decision-making procedures (in
29 Brussels and in EU member states), and resourcing its foreign security missions adequately
30 and quickly, whether in the civilian or military spheres. In today's world there is
31 unfortunately no shortage of opportunities for the EU to get more involved in conflict
32 resolution and crisis management; the only question is whether the EU can find the political
33 will – in Brussels and among its member states – to make the reforms suggested by the
34 considerable body of research it has funded in this area.
